Phat Ren

Full-Stack Web Developer

OPEN TO WORK

github.com/phatrenn-dev-junior | Telegram: @p_ren | Phnom Penh, Cambodia

PROFILE

Student at Build Bright University learning to build complete web applications, from the interface people see to the API and database behind it. Looking for my first full-stack web developer role where I can contribute, learn from experienced teammates and keep growing.

SKILLS

Frontend: HTML, CSS, JavaScript, React, Tailwind CSS, React Router

Backend: Node.js, Express, PostgreSQL, Sequelize, REST API

Tools: Git, VS Code, Vite, npm

PROJECTS

HakzTool - Khmer Video Translation App | Electron, React, TypeScript, Whisper, Gemini API

- Built a Windows desktop app that translates foreign-language videos into Khmer, with a subtitle preview player and a process status view.
- Automated the full pipeline: speech-to-text subtitles with Whisper, translation with the Gemini API, Khmer text-to-speech and rendering the final MP4.
- Added speed control and video effects, and improved performance with chunked transcription, parallel translation and a resume cache for long videos.

Full-Stack Portfolio Website | React, Vite, Tailwind CSS v4, Node.js, Express, PostgreSQL

- Built a responsive multi-page site (Home, About, Projects, Contact) with React Router, dark and light themes and scroll animations.
- Designed a REST API with Express and Sequelize. The contact form validates on client and server, uses rate limiting and saves messages to PostgreSQL.
- Added a protected admin page to read incoming messages, with Helmet, CORS and environment-based configuration.
- Source code: github.com/phatrenn-dev-junior

EDUCATION

Build Bright University (BBU) | 2024 - 2027 (expected)

Studying while building full-stack web projects.

WHAT I AM LOOKING FOR

A junior or intern full-stack web developer position in a team that values learning, clean code and teamwork.
